

Dropout

$p = 0.5$

$$w_{ij} = \frac{w_{ij}}{p}$$

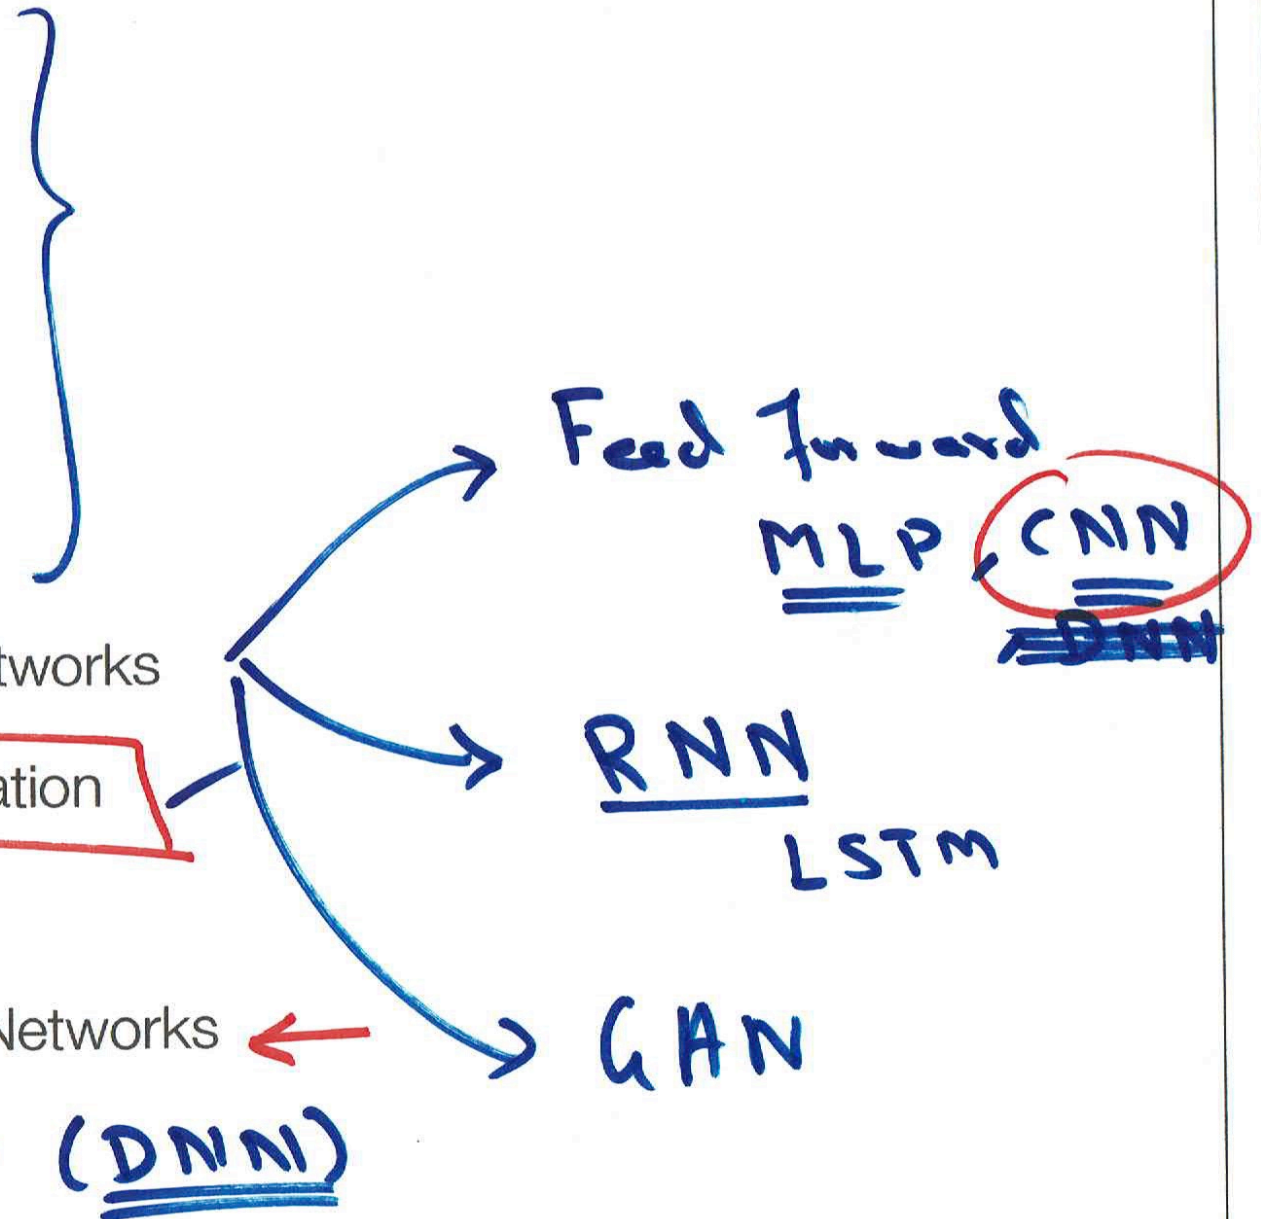

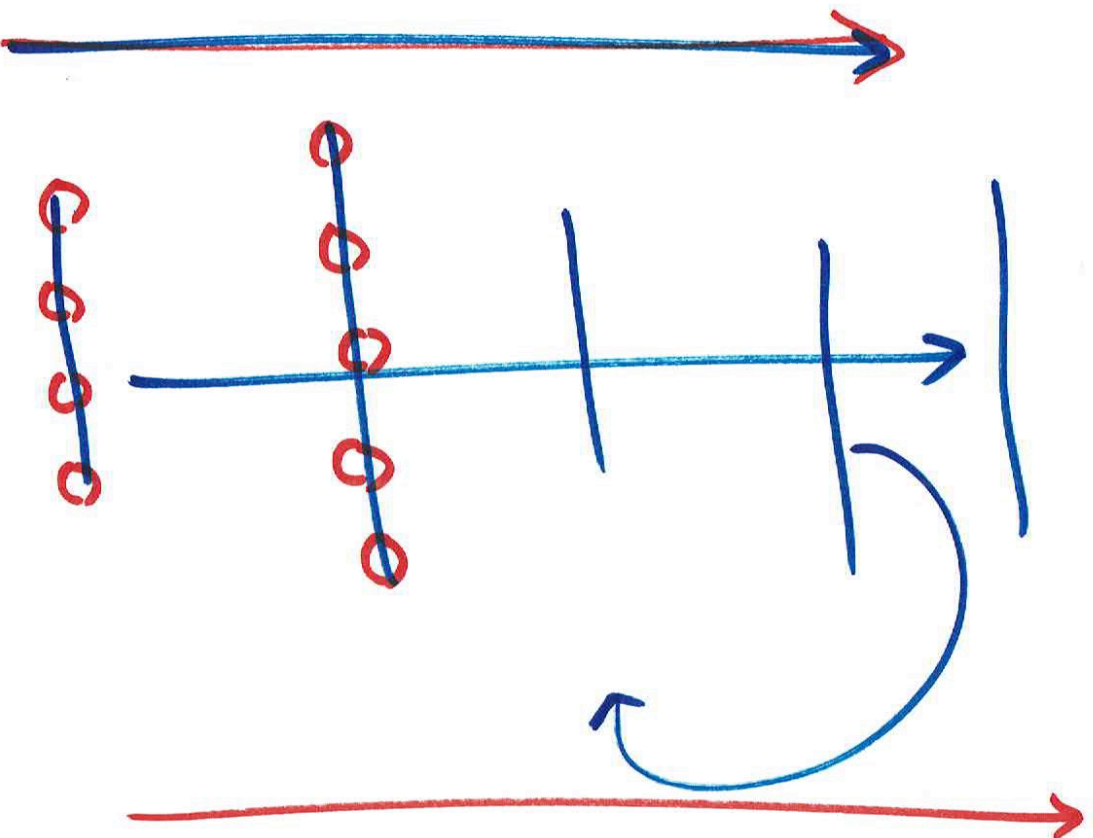

$$\hat{x}_i = \frac{x_i - \mu}{\sigma}$$

$$\begin{cases} \mu_{pop} = \sum \mu_{batch} \\ \sigma_{pop} = \sum \sigma_{batch} \end{cases}$$

A lot more details to talk about

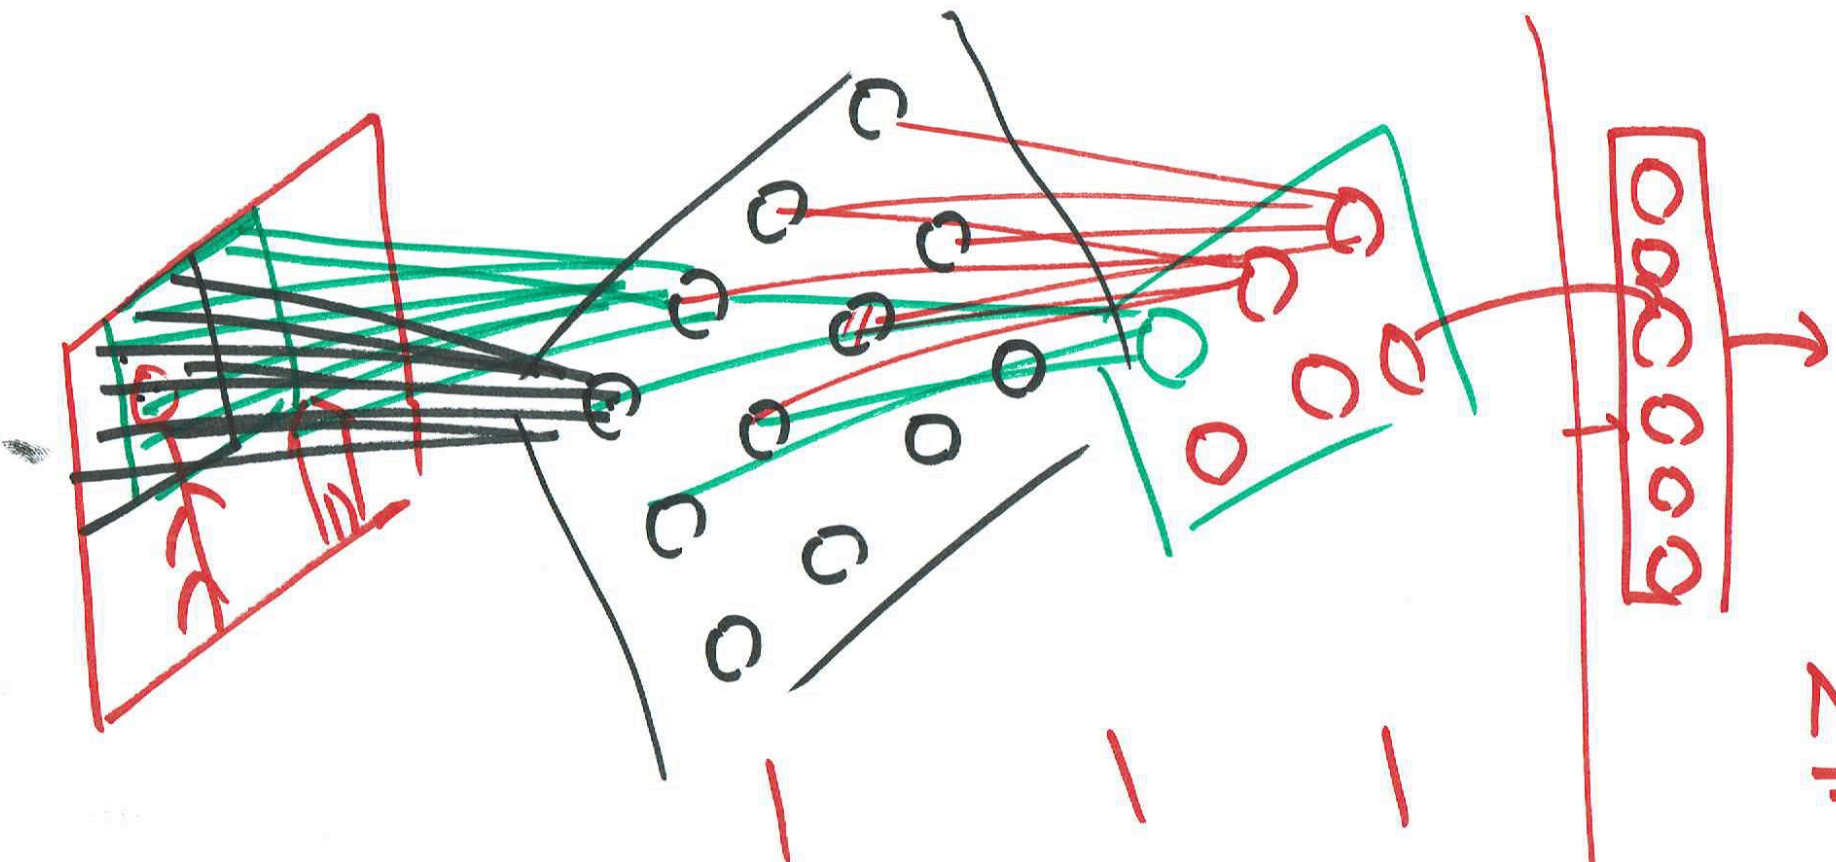

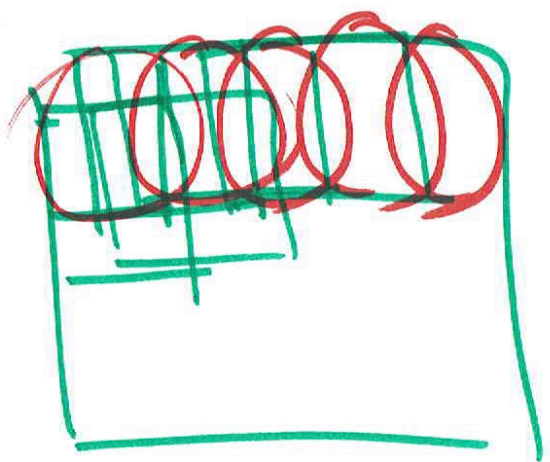

- Activation functions
- Training
 - Loss functions
 - Back propagation
 - Gradient descent
- Other types of Neural Networks
- Overfitting and Regularization
- Neural Net Structures
- Convolutional Neural Networks
- Deep Learning Networks (DNN)
