

How to load data into MySQL Workbench

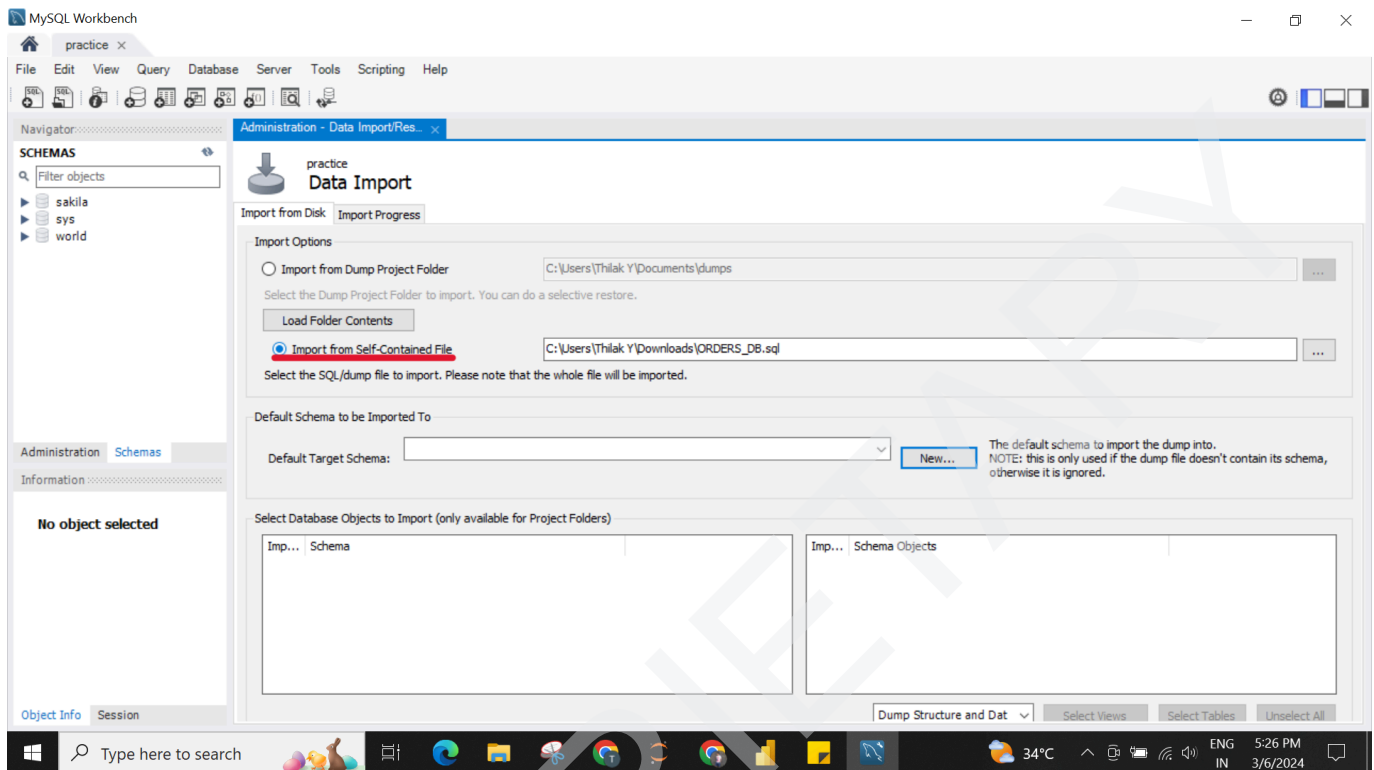

Step 1

Go to **Server** from the top left menu and click on **Data Import**

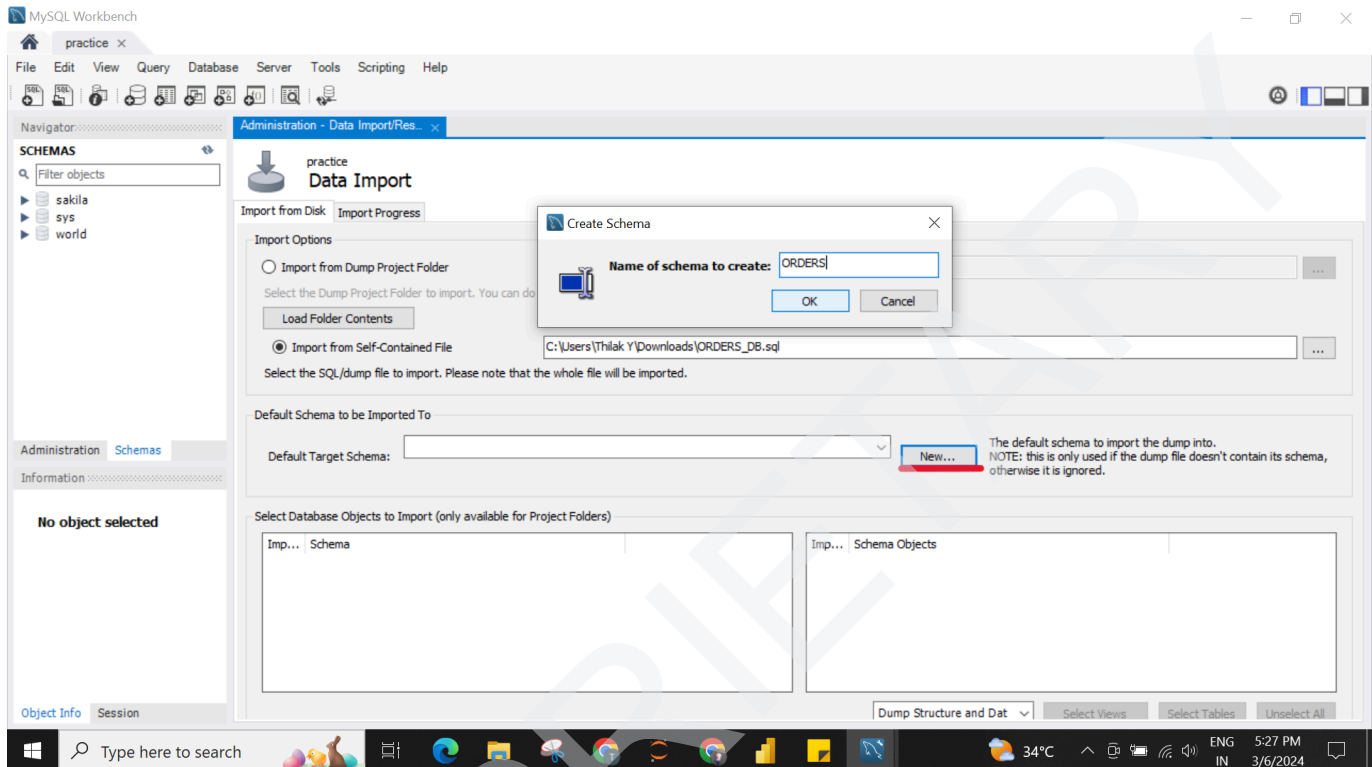

Step 2

Select **Import from Self-Contained File** and browse the SQL dump file

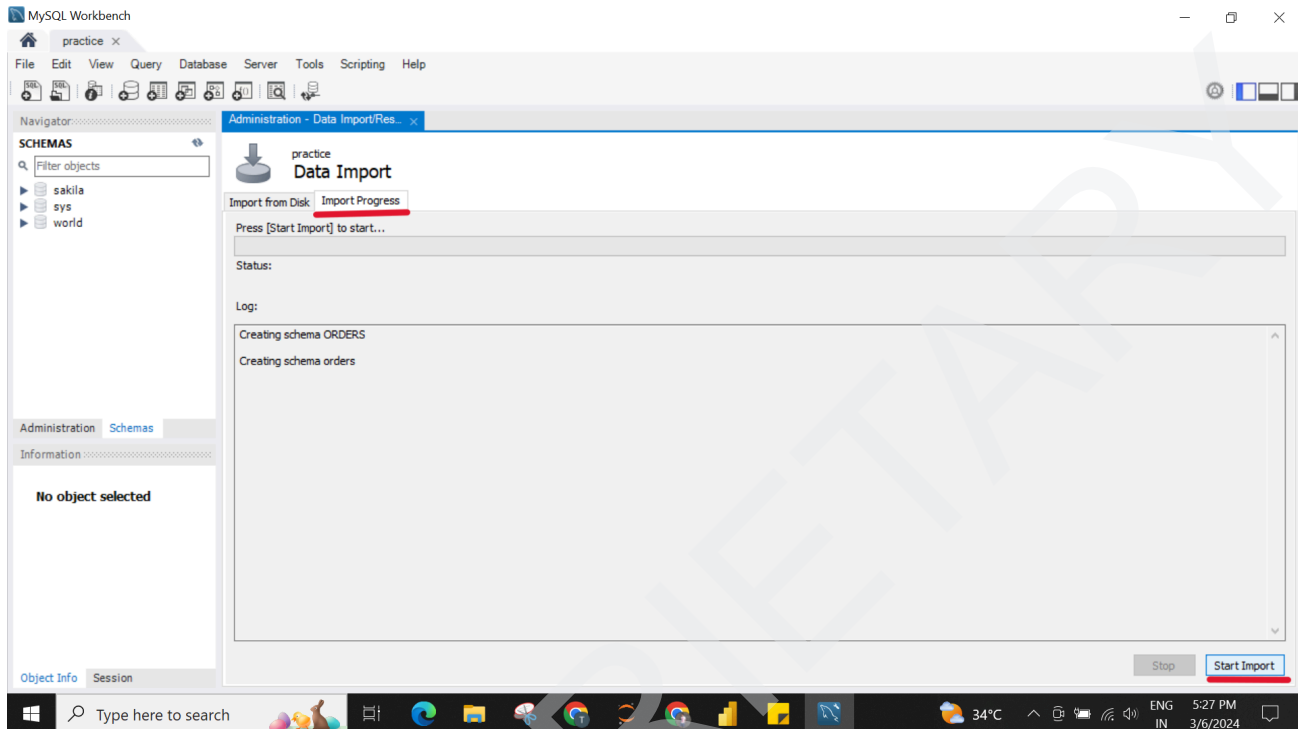

Step 3

Once the file is selected, go to Default Schema to be Imported and hit on the **New** button and select the schema that is created in the Default Target Schema

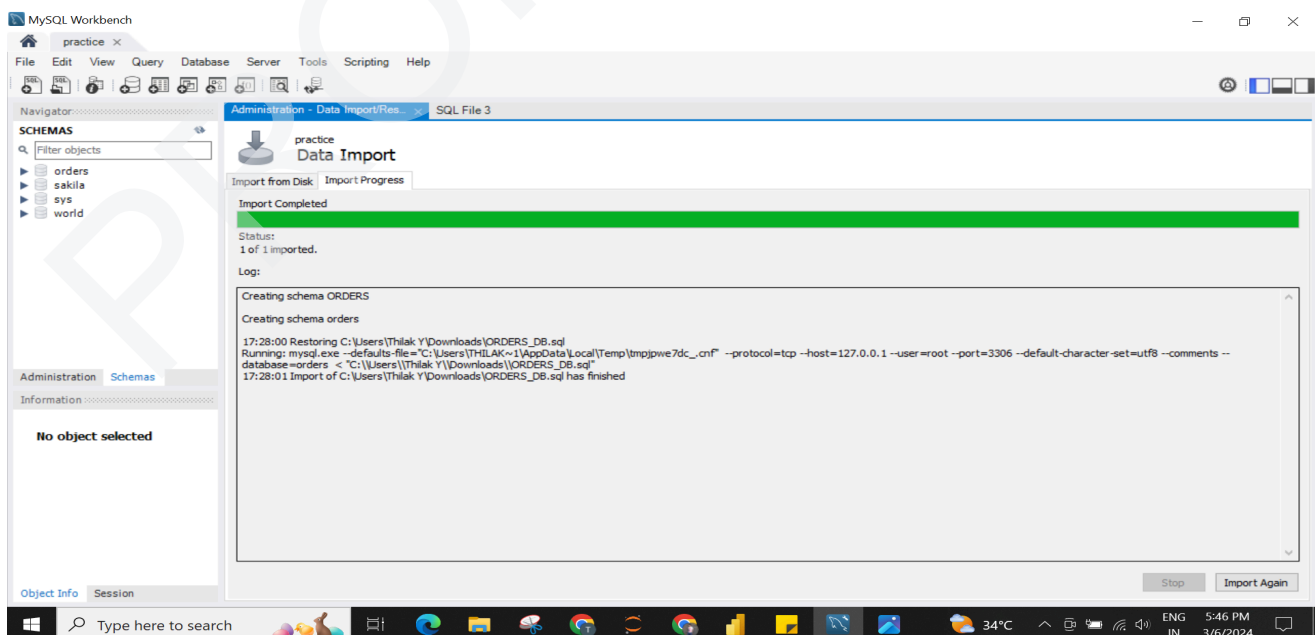

Step 4

Go to the **Import Progress** tab from the top and hit the **Start Import** button in the bottom right section.

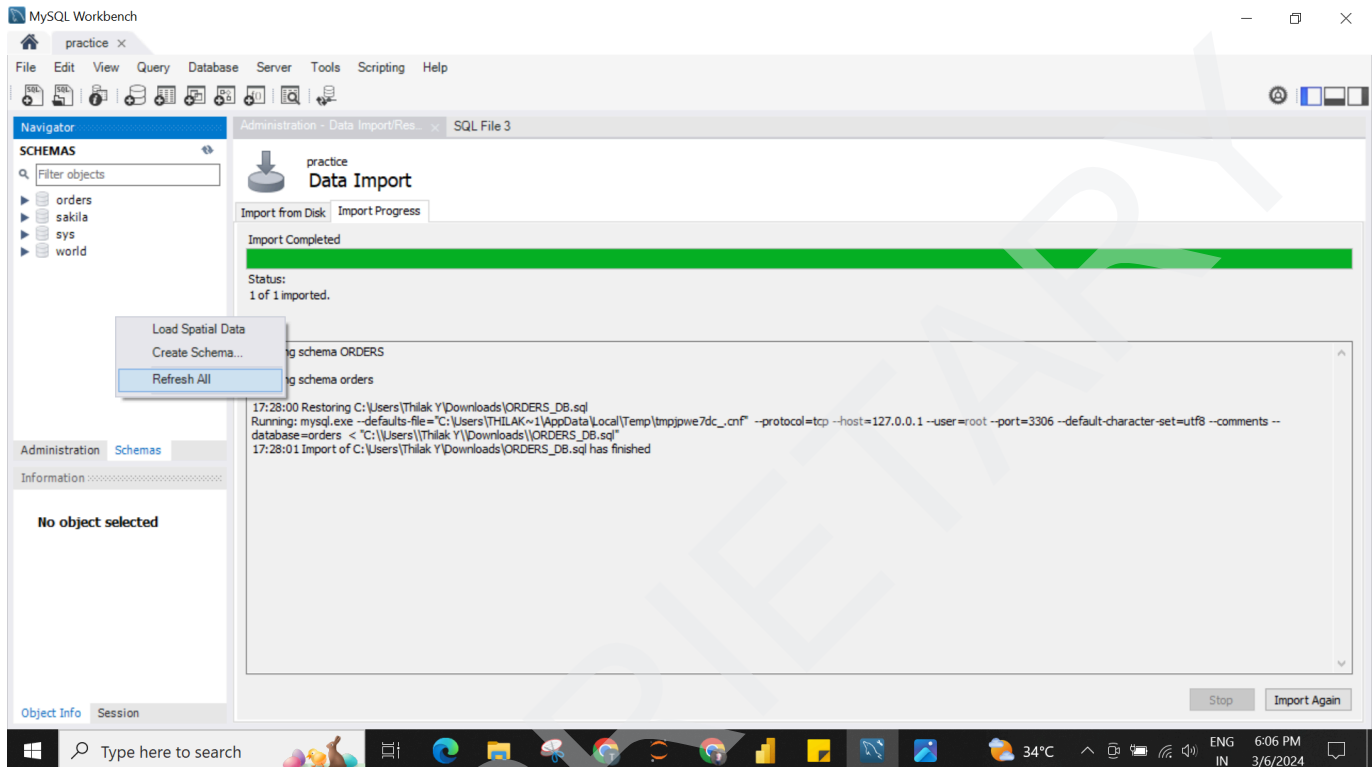

It will take some time to import the file. The entire bar will be green once it's been imported.

Step 5

To make sure the schema is successfully loaded, right click on the Schema pane and select refresh from the drop down menu

Now, double click on the schema to start working on the schema.
